

# *This makes the i-CON TRACE® unique*

## *100% Connectivity*

With the i-CON TRACE®, Erska presents the world's first IoT soldering station that enables full traceability in manual soldering. Featuring integrated WLAN, Bluetooth and a network card on board, the i-CON TRACE® provides 100 % connectivity in digitally networked manufacturing processes straight out-of-the-box.

## *Green means Go!*

Featuring only an on/off switch and three LEDs, the operating concept differs significantly from other industrial soldering stations. The LED interface literally gives the user the green light as soon as the predefined temperature at the soldering tip is reached and the soldering process can be started. This ensures that each solder joint is soldered at exactly the right temperature and with the appropriate material.

## *Best Performance*

The i-CON TRACE® impresses with maximum performance and minimum operating costs. Its 150-watt power ensures fast heat-up and even faster reheating. The temperature can be adjusted very precisely in 2° steps. Newly designed soldering tips bring the heat with pinpoint accuracy to the solder joint.

Both the heating element and the soldering tip of the i-CON TRACE® can be changed individually without any loss of soldering performance. This means that each wear part is only replaced if it is really necessary – saving not only resources but also money.

The patented Tip'n'Turn concept of the i-CON TRACE® soldering tips allows tips to be changed in record time and without the risk of burns.

Rainforest Edition.*

# Premium Performance. Minimum Cost.

## *Sustainably into the future.*

On the occasion of our 100th anniversary, we are donating the proceeds of the Rainforest Edition, which is limited to 300 i-CON TRACE® stations, to a sustainable rainforest project run by a large international aid organization.
